

André Kreutzer

Sr. QA Engineer / SET — Playwright · C# · API · Mobile

+55 41 99891-8672 | andre.kreutzer@outlook.com | [linkedin.com/in/andreki](https://www.linkedin.com/in/andreki) | [Portfolio](#) | Curitiba, Brazil

Sr. QA Engineer / SET with 4+ years building and maintaining test automation for fintech and iGaming platforms across web, iOS, and Android. Hands-on with Playwright in C#/.NET, plus Cypress and TypeScript; API testing and mocking with Postman, Charles Proxy, and Mockoon; and native mobile automation with XCUITest and Espresso. Experienced owning cross-platform regression, framework migrations, and test strategy end to end in remote teams, and building AI-assisted workflows that cut test-planning and regression time.

CORE SKILLS

Web Automation: Playwright (C#/.NET and TypeScript, POM) · Cypress (E2E + component) · cypress-axe

Mobile Testing: XCUITest (iOS) · Espresso (Android) · cross-platform iOS/Android/Web regression · BrowserStack · Sauce Labs · Android Studio & iOS simulators

API Testing: Postman · Charles Proxy (traffic inspection) · Mockoon (API mocking) · REST API validation · backend integration testing

Languages & Data: C# · TypeScript · JavaScript · SQL (MySQL, SQL Server)

CI/CD & Observability: GitLab CI · Cypress Cloud · Datadog · Grafana

Testing Practice: Manual & Functional Testing · Test Planning & Strategy · Exploratory Testing · Process Improvement

AI-Driven QA: MCP-based test generation, AI-assisted code review gating, requirements-to-test-plan automation

PROFESSIONAL EXPERIENCE

SET (Software Engineer in Test) — Kaizen Gaming Athens, Greece (Remote)

Jan 2025 – Present

Playwright · C# · XCUITest · Espresso · Charles Proxy · Grafana

- Built an automated regression suite for offer-modal translation/localization validation, closing coverage gaps with Transifex-backed correctness checks — replacing manual localization spot-checks with a repeatable automated gate.
- Designed mocking strategies for real-data-dependent UI components (Player Stats, Momentum Chart), root-caused and resolved recurring Playwright mocking failures, and built the Momentum Web automation suite from scratch.
- Extended automated coverage across Live/Pre-event Stats and Soccer Lineup player stats, spanning backend integration through Web, Android, and iOS.
- Owned weekly full-platform (iOS/Android/Web) regression testing for the Sportsbook streaming product** for 12+ months.
- Led technical spikes informing architecture decisions — platform-revamp impact analysis, real-data test-dependency evaluation, and a PoC for a unified streaming endpoint — while sustaining cross-team regression support across 6+ release cycles.

Sr. QA Engineer — Questrade Toronto, Canada (Remote)

Mar 2023 – Sep 2026

Cypress · Playwright · TypeScript · SQL · Postman · BrowserStack · Agile

- Led QA for a complete site migration** (Sitefinity → Contentful/Next.js) covering 500+ pages, with full-stack validation (functional and non-functional: accessibility, SEO, EN/FR parity, security/logging, tracking/consent compliance); surfaced 10+ production defects, including a critical pre-consent tracking-compliance gap, and drove the Gate 2 go/no-go via live tracking of 72 test cases.
- Ran the migration shift-left, with tests executing locally during development and component-level tests built alongside new components, and drove it end to end with AI assistance — from requirement analysis through to the E2E regression architecture in Cypress.
- Led two successive framework migrations** (Robot Framework → Playwright, then Playwright → Cypress for the Learning Centre MVP), including CI cutover to Cypress Cloud, and cut regression execution time by 80%+.
- Built the Learning Centre MVP's QA architecture from scratch — smoke/sanity/regression suite taxonomy with automated accessibility scanning (cypress-axe), data-driven redirect-integrity tests, and multi-environment support.
- Built an AI-driven automation workflow integrating MCP servers to generate full E2E and page-level test suites in under 1 hour, and a QA Companion tool cutting test-planning effort from 3–4 days to ~2 hours.
- Automated 200+ functional tests and implemented AI-assisted regression with pre-PR code review gating, increasing device coverage while accelerating releases and reducing review churn.

Software QA Analyst — Tunts.Rocks | AOA Technology Curitiba, Brazil

Jun 2020 – Jan 2023

Functional Testing · Jira · Postman · Agile

- Owned test planning and scenario-based edge-case coverage for product releases, improving defect prevention and reliability ahead of launch.
- Drove process improvements to functional testing workflows, maintaining multi-platform stability across release cycles.

EDUCATION & CERTIFICATIONS

A.S., Analysis and Systems Development — Descomplica, Curitiba, Brazil (GPA 9.36/10) — Jun 2025

Coursework: CS50x (Harvard), QA Automation Training Program, Cypress Express, Onebitcode, ZombiePlus, Gravidade Zero

AWARDS

Act to Impact Award — Questrade, Nov 2023 — for consistently exemplifying IQTECH core values
